Family Engagement Activity – Session 7

- Create a bridge together!
- Ask your student to explain the Build a Bridge activity that was done during the Discover session. Choose a location for your bridge, like the floor or between two chairs. Use your Six Bricks or other materials and work together to design and build your bridge. Then test your bridge by seeing how much weight it can hold, driving cars across it, or including it in pretend play. Can you think of another way to build a bridge?
- On your Activity Log, write down what materials you used for your bridge and how you tested it.

During this activity, your family might say or think...

Hm!
I wonder
what this
does?
